

# Linking to a Website

1. Make sure your editing is turned on.
2. From the “**Add a Resource**” drop-down menu, choose “**Link to a file or Website.**”

3. Type in the name of the site as you'd like it to appear to the students.  
You may add a description, but it will only appear if you chose to display the site in the “Same Window” and select “Keep Page Navigation visible on the same page.”

4. Type in the address of the Website. Note that the “http://” is already present.

5. Make sure you are viewing the “advanced” window features. There is a toggle button that can show or hide the advanced features.

- There are a number of ways to have a Website displayed: as a new or pop-up window, as the same window, or as the same window with the navigation bar shown with or without “frames” showing.
- To have the Website appear as a “pop-up” or new window, simply select the “New Window” option as shown below.

- To have the link take students out of Moodle completely and on to the other Website, Same Window and leave the “keep navigation visible on the same page” option at “No.”

- To have the Website appear within a frame below your Moodle Navigation bar, select Same Window option from Window and “Yes, with frame” under the keep page navigation option.

- I recommend skipping all of the other options and clicking **“Save and Return to Course.”**

- Click on the link to check the link. Click on the update icon (paper and pencil) to change the Web address, change how it appears, etc.

- The four arrows enable you to move the resource to a different location ➕

The arrow indents the recourse →

The paper and pencil is the “Update” tool. It enables you to change the properties or edit the resource. 🖋️

The X deletes the resource. ✖️

The eye enables you to hide the resource from students. 👁️ An open eye indicates that students can access the resource. A closed eye 👁️ indicates that students can NOT access it.
